

ME01 Edging Technical Data

ME01 Edges are a solid, pressure-moulded piece designed as a sand pit edge. This product is designed to be partially buried and with the remainder to be used as a retaining device for grass or sand.

The basis proprietary specifications for ME01 is as follows

Height	: 325mm
Length	: 2000mm
Width	: 75mm

A basic profile of the product is shown above. The moulded cups set into the side are to provide extra surface area and strength once buried. The unit is double sided to split levels can be achieved.

The make-up of this product is very simple. There is a formulated mixture of rubber buffings, polyurethane polymer and pigment. All branches should have the appropriate MSDS forms for these materials.

The expected life-span of this edge should be in excess of five –seven years dependent on usage and installation method. This is a highly robust product designed to withstand high levels of intensive use. This product is guaranteed for a period of three years.

Please refer to fire testing etc on the current *Reflex* specification and the retardants used on the binder MSDS sheets.
